

VOLUME 1

AI Prompts That Actually Work for Cypress & Playwright Engineers

E2E automation. Locator strategies.

Debugging edge cases. Tested on real projects.

How to Get the Best Results

1

Be specific about your environment

Mention Cypress or Playwright version + UI library (React, Angular, etc.)

2

Include real test targets

Paste actual component code, selectors, or test steps for actionable output.

3

Iterate on prompts

Ask follow-ups like "Now focus only on flaky retries" or "Best locator for dynamic lists?"

4

AI complements, not replaces

Use results to learn patterns — always validate against your real system.

PRO TIP

Start every prompt with your framework version — it dramatically improves output accuracy.

Test Case Generation

PROMPT #01

THE PROMPT

Generate comprehensive test cases for [feature]. Include: positive, negative, boundary, and edge scenarios. Framework: [Cypress/Playwright + version]. Focus on E2E user interactions.

BEST FOR:

Creating baseline coverage for new features — works great when paired with real user flows.

Locator Strategy Review

PROMPT #02

THE PROMPT

Here are my selectors: [paste selectors]. Suggest improvements for maintainability and resilience. Prefer data-test attributes or role-based locators over brittle CSS/XPath. Explain why each suggestion improves test stability.

BEST FOR:

Hardening locator strategies for long-term maintainability in both Cypress and Playwright.

Debugging Flaky Tests

PROMPT #03

THE PROMPT

This test fails intermittently: [paste test]. Stack: [framework + CI details]. Suggest top 5 root causes ranked by likelihood. Consider timing, async waits, network stubbing, and test data setup.

BEST FOR:

Pinpointing elusive flakiness between local and CI runs.

Cypress

Playwright

API Mocking for UI Tests

PROMPT #04

THE PROMPT

I'm testing [feature]. Show Cypress or Playwright examples to mock network calls using [mock data]. Ensure all typical success/error cases are handled.

BEST FOR:

Stabilizing tests by isolating network behavior while still validating app logic.

Cypress

Playwright

E2E

Cross-Browser & Device Coverage

PROMPT #05

THE PROMPT

Suggest a test matrix covering browser (Chrome, Edge, Safari, Firefox) and device types (mobile, tablet, desktop) for [app]. Highlight what should run in CI vs. nightly runs.

BEST FOR:

Ensuring realistic cross-environment coverage without exhausting pipeline time.

Cypress

Playwright

PV

Performance & Visual Checks

PROMPT #06

THE PROMPT

Generate Cypress/Playwright commands or plugins to: measure page load time, detect layout shifts, compare screenshots against baseline.

BEST FOR:

Adding lightweight performance and visual checkpoints to E2E runs.

Cypress

Playwright

E2E

Accessibility Audit

PROMPT #07

THE PROMPT

Integrate accessibility checks (axe-core / Playwright a11y tree) into my test suite. Provide sample commands and expected output validation.

BEST FOR:

Shift-left accessibility compliance without dedicated tools.

Cypress

Playwright

PE

Parallel Execution Optimization

PROMPT #08

THE PROMPT

My suite takes too long. Suggest strategies to parallelize Cypress/Playwright tests (sharding by spec, CI matrix setup, retry logic).

BEST FOR:

Reducing CI runtime and improving feedback loops.

Cypress

Playwright

TS

Test Summary for Reporting

PROMPT #09

THE PROMPT

Summarize these Cypress/Playwright test results: [paste logs]. Output a concise report for non-technical stakeholders with overall confidence, flaky areas, and suggestions to stabilize.

BEST FOR:

Helping managers understand automation quality beyond pass/fail metrics.

Cypress

Playwright

Interview Coaching

PROMPT #10

THE PROMPT

I'm preparing for a QA automation interview. The question is: [question]. Here's my answer: [text]. Evaluate clarity, real-world depth, technical accuracy, and framework knowledge (Cypress/Playwright). Rewrite it stronger.

BEST FOR:

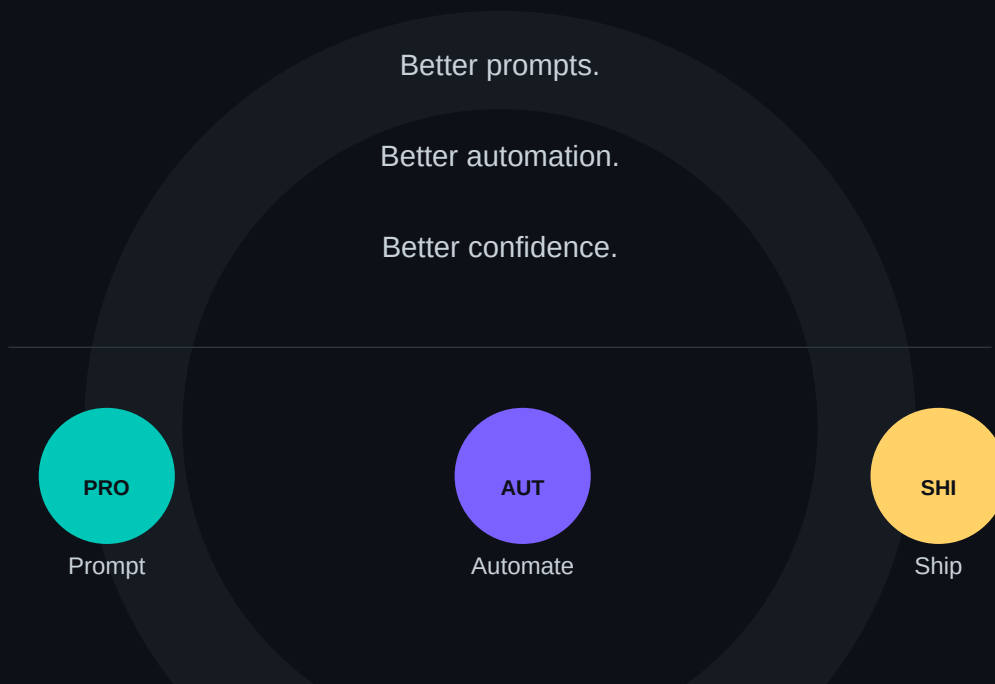

Polishing professional articulation while showcasing real automation expertise.
